The hostel management system is the system that manages the details of the students staying in the hostel, admission details, staffs details, visitor's messages and the receipt of the fees paid by the students. It will be one of the important projects that will simplify the work of the institutions in getting the seats booked in the hostels with great ease. Hostels are the part of the institutions which will help the students to stay here who are coming from far places. It will help the students in getting the seats in the hostels without any difficulty and will also help in maintaining transparency. It will help in simplifying life of everyone to acquire seats with great ease. The interface must be simple and easy to understand.

The modules that can be included in the hostel management system are as follows:

- **Users:** This module will help in creating the new users with the login credentials.
- **Change password:** This module will help in changing the password of the user.
- **Forget password:** This module will help in resetting the password of the account of the user.

- **Registration:** This module will help in maintaining the details like academic information, personal information, room details etc.
- **Room details:** This module will help the user to add the room details and update the status of the rooms like whether it is vacant or occupied.
- **Fees:** This module will help to add the fees of the students and also allow to update or delete the fees entered.
- **Visitors:** This module will add the visitors details.
- **Employees:** This module will add the employee details. It can also be updated or deleted.
- **Status:** The status of the rooms and the students will be updated through this module.
- **Reports:** This module will help in generating the students and the visitors reports.
